# What is ACOS?

Agentic Creator OS is a **configuration layer for Claude Code** that transforms it into a full creative production environment.

When you install ACOS and open Claude Code in that directory, you get an intelligence system that:

- **Auto-routes your requests** — type `/acos` and it figures out which command, agent, and skills to use
- **Loads skills automatically** — 630+ domain skills activate based on context, not manual selection
- **Deploys specialized agents** — 40+ agents with deep domain knowledge for writing, music, code, design, and strategy
- **Orchestrates workflows** — multi-step pipelines that produce complete artifacts from a single prompt
- **Learns from every session** — trajectory tracking improves routing and skill selection over time

## The 7 Pillars

### Commands

130+ creator commands with smart routing

### Agents

40+ specialized AI personas

### MCP Servers

5+ external tool integrations

### Intelligence

Starlight meta-coordinator

### Skills

630+ domain knowledge auto-activation

### Workflows

8 orchestrated multi-step pipelines

### Templates

20+ reusable content patterns

# Installation

## Prerequisites

- Claude Code CLI installed (`npm install -g @anthropic-ai/claude-code`)
- Active Anthropic API key or Claude subscription
- Node.js 18+ and Git

## Option 1: Full Install (Recommended)

```
$ git clone https://github.com/frankxai/agent-creator-os.git
$ cd agent-creator-os
$ ./install.sh
ACOS v7.0 installed successfully!
130 commands, 630 skills, 40 agents ready.

$ claude
# Claude Code opens with ACOS loaded
```

## Option 2: Manual Setup

```
$ git clone https://github.com/frankxai/agent-creator-os.git
$ cd agent-creator-os
# Copy commands to user level
$ cp .claude/commands/*.md ~/.claude/commands/
$ claude
```

**Tip:** Run `/acos` as your first command. It shows all available commands and confirms the system is loaded.

# Your First 5 Commands

Try these in order to experience what ACOS can do:

## 1. `/acos` — The Smart Router

Your single entry point. Shows all commands and auto-routes based on what you describe.

```
/acos  
ACOS v7.0 — Smart Router  
What would you like to create today?
```

## 2. `/article-creator` — Write a Blog Post

Guided article creation with SEO optimization, schema markup, and publishing workflow.

```
/article-creator  
Topic: "How to build AI agent systems"  
# Auto-loads: seo-content-writer, schema-markup, frankx-brand skills
```

## 3. `/spec` — Build a Feature

Spec-driven development. Define what you want, ACOS generates the architecture and code.

## 4. `/create-music` — Produce a Track

AI music production with Suno integration. Genre selection, prompt crafting, metadata.

## 5. /infogenius — Generate Images

Research-grounded image generation. Combines research + prompt engineering + Nano Banana MCP.

## Command Reference — Creation

COMMAND	WHAT IT DOES	AUTO-LOADED SKILLS
<code>/article-creator</code>	Guided blog article creation	seo-content-writer, schema-markup
<code>/create-music</code>	AI music production pipeline	suno-ai-mastery, suno-prompt-architect
<code>/infogenius</code>	Research-grounded image generation	prompt-engineering, nano-banana
<code>/generate-images</code>	Direct image generation	nano-banana MCP integration
<code>/generate-social</code>	Platform-optimized social content	social-content, copywriting
<code>/factory</code>	Full publishing pipeline	content-strategy, seo-fundamentals
<code>/products-creation</code>	Digital products & courses	product-engine, pricing-strategy
<code>/author-team</code>	Book writing with author team	beautiful-prose, copy-editing

## Command Reference — Strategy

COMMAND	WHAT IT DOES	AUTO-LOADED SKILLS
<code>/starlight-architect</code>	Enterprise AI system design	architecture-patterns, ai-agents-architect
<code>/starlight-intelligence</code>	Strategic AI orchestration	multi-agent-patterns, swarm-orchestration
<code>/council</code>	Multi-agent strategic council	brainstorming, multi-agent-brainstorming
<code>/research</code>	Daily intelligence operations	deep-research, research-engineer
<code>/plan-week</code>	Weekly content planning	content-marketer, seo-content-planner
<code>/harvest</code>	Prompt discovery & collection	prompt-engineering-patterns

# Command Reference — Development

COMMAND	WHAT IT DOES	AUTO-LOADED SKILLS
/spec	Spec-driven feature development	architecture-patterns, clean-code
/nextjs-deploy	Next.js + Vercel deployment	next-best-practices, vercel-deployment
/ux-design	UI/UX design workflows	web-design-guidelines, shadcn-ui
/automation-dev	MCP servers & automation	mcp-builder, mcp-architecture

# Command Reference — System & Quality

COMMAND	WHAT IT DOES
/acos	Smart router — single entry point to all commands
/inventory-status	Content inventory dashboard
/mcp-status	MCP server health check
/publish	Content publishing with quality gates
/review-content	Content quality review
/classify-content	Content routing & classification
/polish-content	Polish to publish-ready quality

# How Auto-Activation Works

Skills load automatically based on context. You never need to manually invoke a skill.

```
# You type:
"Write a blog post about AI agent security"

# ACOS auto-loads:
seo-content-writer → schema-markup → frankx-brand
Routes to: /article-creator
```

# Meet Your Agents

40+ specialized agents, each with deep domain knowledge. Here are the key ones:

## Writing & Editing

- **Developmental Editor** — Story structure, pacing
- **Line Editor** — Prose polish, voice consistency
- **Content Polisher** — Publish-ready refinement
- **SEO Content Writer** — Search-optimized articles

## Strategy & Design

- **Starlight Architect** — Enterprise AI systems
- **UI/UX Designer** — Interface design
- **Strategic Intelligence** — Business foresight
- **Research Librarian** — Fact-checking, sources

## Production

- **Music Producer** — AI music creation
- **Image Generator** — Nano Banana MCP
- **Content Creator** — Multi-format content
- **Social Strategist** — Platform optimization

## System & Quality

- **Code Reviewer** — Code quality audits
- **Sensitivity Reader** — Cultural awareness
- **Publishing Strategist** — Launch planning
- **Continuity Guardian** — Consistency checks

**Agent files are markdown.** Each agent is defined in `.claude/agents/` as a markdown file. You can read, edit, or create new agents by modifying these files.

# MCP Server Integrations

ACOS connects to external tools through Model Context Protocol (MCP) servers:

## Playwright

Browser automation. Navigate, click, screenshot, fill forms. Useful for web scraping, testing, and visual verification.

```
# Already installed globally
```

## Nano Banana

AI image generation via Gemini. Generate hero images, thumbnails, diagrams, and visual assets from text prompts.

```
claude mcp add nanobanana
```

## Memory

Persistent memory across sessions. Store entities, relationships, and observations that survive conversation resets.

```
claude mcp add memory
```

## Resend

Email delivery. Send newsletters, product delivery emails, and transactional messages directly from Claude Code.

```
claude mcp add resend -e  
RESEND_API_KEY=xxx
```

## On-Demand Servers

Add these when you need them, remove when you don't (reduces startup latency):

```
# Browser automation with vision  
$ claude mcp add browser-use -- uvx --from 'browser-use[cli]' browser-use --  
mcp  
  
# Sequential reasoning chains  
$ claude mcp add sequential-thinking -- npx -y @anthropic/mcp-sequential-  
thinking
```

# Orchestrated Workflows

ACOS includes 8 pre-built multi-step workflows that chain commands, agents, and skills together:

## Factory Pipeline

The most powerful workflow. Takes a topic and produces a complete published artifact.

RESEARCH → OUTLINE → DRAFT → EDIT → SEO →  
PUBLISH

```
/factory
```

```
Topic: "Production LLM agents on Oracle Cloud"
```

```
# Produces: MDX article, SEO metadata, schema markup, social posts
```

## Publishing Pipeline

Write → Review → Polish → SEO → Deploy

## Research Pipeline

Discover → Validate → Synthesize →  
Report

## Product Launch

Spec → Build → Test → Deploy → Market

## Music Production

Concept → Prompt → Generate → Master  
→ Distribute

**Pro Tip:** Workflows are composable. You can chain commands in sequence or run them in parallel using ACOS swarm mode.

# You're Ready.

ACOS is installed. Your agents are standing by.  
Type `/acos` and start creating.

## Next Steps

1. Run `/acos` to see all commands
2. Try `/article-creator` for your first article
3. Explore `.claude/agents/` to meet your agents
4. Check `.claude/skill-rules.json` for auto-activation rules
5. Star the repo: [github.com/frankxai/agentic-creator-os](https://github.com/frankxai/agentic-creator-os)
