

PRODUCT GUIDE

# Generative Creator OS

Multi-modal creative production system.  
Text, image, music, code — one unified workflow.

# What is Generative Creator OS?

A multi-modal creative production system that unifies text, image, music, and code generation into a single workflow.

Where ACOS focuses on commands and automation, GenCreator OS focuses on the creative output itself. It provides tools, templates, and workflows for creators who work across multiple media types.

## Four Creative Domains

### Text & Writing

Blog posts, books, courses, documentation. SEO-optimized, brand-consistent, publish-ready content.

### Image & Visual

AI-generated imagery via Nano Banana. Hero images, diagrams, social graphics, thumbnails.

### Music & Audio

AI music production via Suno. Prompt engineering, genre mastery, commercial distribution.

### Code & Products

Digital products, templates, tools. From concept to packaged, sellable artifact.

# Creation Pipelines

Each creative domain has a dedicated pipeline that takes raw ideas to finished artifacts.

## Content Pipeline

Agents: Content Engine, SEO Writer, Line Editor, Publishing Strategist

## Visual Pipeline

Tools: Nano Banana MCP, InfoGenius, brand-consistent prompts

## Music Pipeline

Tools: Suno v4.5+, Frequency Alchemist, Music Producer agent

## Product Pipeline

Agents: Product Architect, Package Engineer, Creation Engine

# Multi-Modal Workflow

The real power of GenCreator OS is combining pipelines. A single creative project produces artifacts across all four domains.

## Example: Product Launch

Launching a digital course generates artifacts across all domains simultaneously:

DOMAIN	OUTPUT
Text	Course content, sales page, email sequence, blog announcement
Visual	Course thumbnail, social graphics, diagram illustrations
Music	Background tracks for video lessons, launch promo audio
Code	Product page, checkout integration, delivery automation

## The Creator Advantage

Most creators are specialists in one medium. GenCreator OS makes you a multi-modal creator — producing professional-quality work across text, image, music, and code from a single workspace. This isn't about replacing craft. It's about amplifying your creative range.

### ECOSYSTEM

GenCreator OS works alongside ACOS (automation) and Vibe OS (state management) as the creative production layer of the FrankX ecosystem.

# Create across mediums.

Text. Image. Music. Code.

One workflow. One creator. Unlimited output.

## Get Started

- Choose your first creative domain
- Follow the pipeline from concept to artifact
- Add a second domain to the same project
- Experience the multi-modal advantage
- Build your creative system, not just content
