Executive Summary & System Architecture

Technical specification guide on implementing `.well-known/agent-card` standards and machine-to-machine APIs for autonomous agent interoperability.

The Sovereign Core Principle: In the Agentic Era, leverage is no longer determined by the size of your team, but by the architecture of your autonomous constraints and multi-agent coordination loops.

Core Framework Pillars

A2A Discovery & Handshake Protocol

How autonomous agents discover endpoints, verify cryptographic signatures, and execute tasks via OpenAPI JSON manifests.

Production Implementation Protocols

Follow this step-by-step execution matrix to integrate these frameworks into your live production environment:

- ✓ **Step 1: Constraint Calibration** — Establish negative-constraint vocabulary and security perimeter.
- ✓ **Step 2: Dual-Layer Memory Integration** — Wire ephemeral state buffers into persistent vector memory.
- ✓ **Step 3: Multi-Pass Orchestration** — Separate raw generation from deterministic schema verification.
- ✓ **Step 4: Automated Quality Gating** — Enforce pre-commit type check, link audit, and AI-slop refusal rules.

Sovereign Quality Verification Gate

Before deploying any artifact to public-facing channels, verify adherence to the FrankX 5-Gate Integrity Standard:

- ✓ **Gate 1 (Voice & Brand):** Direct, technical, results-first. No spiritual guru claims or hyperbolic buzzwords.
- ✓ **Gate 2 (Anti-Slop Audit):** Strict refusal list checked. Zero instances of "delve", "tapestry", or "testament".
- ✓ **Gate 3 (Code & Schema Integrity):** Strict TypeScript types, verified JSON schemas, and zero broken links.
- ✓ **Gate 4 (Execution Readiness):** Immediate copy-paste utility for the practitioner without missing dependencies.
